digitalSTROM

Do you want to make a difference and be at the forefront in the smart home market? Then join our team in Schlieren-Zurich as

Head of Software Development (m/f/d)

Are you inspired by the latest technologies and innovations in embedded software and IoT? A complex IoT environment with distributed intelligence and systems is exactly your thing?

Then send us your application because we are looking for you!

Responsibilities

In this position, you will be working within a complex environment of connected devices that communicate via different technologies and protocols both within smart homes and with our backend in the cloud. Together with an agile and self-organizing development team, you will be responsible for concept, design, development, test and documentation of new features and products. You will work closely together with our product management and product owners aligning requirements to our software and system architecture. You manage a team of on-site and remote engineers and drive the evolution of the embedded server software.

Qualifications

- Master's degree in Computer Science, Mathematics, Physics or a comparable scientific course of study
- More than 5 years' professional experience in the design and development of software modules/infrastructures running on an embedded Linux distribution based on an ARM architecture in C++11/14
- Extensive knowledge of agile software development and management methods
- Familiar with DevOps practices, Open Source libraries and tools like GCC, Git and Jenkins
- Excellent communication skills
- Fluency in English, German is a plus

Working Environment

We offer you an attractive working environment and a state-of-the-art office space in the Building Technology Park Zurich, a 5-minute walk away from the train station Schlieren-Zurich. Benefit from flexible working time models, plenty of scope for creativity and initiative, as well as a flat hierarchy with short decision-making channels. You can expect an inspiring international company culture and, above all, a smart home system with the potential to change the world. Let's grow together!

Additional information about our company is available on our website at www.digitalstrom.com or the social web on Twitter, Facebook and YouTube.

digitalSTROM is a smart home platform that unites intuitive operation with easy installation. We equip all electrical and broad-band appliances in the home with their own intelligence and network them with both the Internet and each other. The result is a digital infrastructure in the home that can be extended at any time by additional applications via plug and play due to its open interfaces. The smart home places its residents at the centre and assists them with their daily household tasks. digitalSTROM brings this intelligence to the home for everyone and transforms traditional home technology into the digital world.
